*Designing and  
integrating complex  
audio, video,  
control and  
acoustical solutions*

*We've been  
preparing to help you*

*Consultation intended  
to define and support  
your technology goals*

In a sea of solutions how do you choose the right one for your organization?

Planning ahead helps to ensure everything has a place to live in a very full equipment rack

With help. Demanding project coordination without support opens up the door for the technical glitches that cause changes and cost overruns. How do you regulate and reduce changes?

With Help.

Consultant prepared documents bring a greater level of accountability and a more predictable outcome to installation and integration projects.

MBF Audiovisual is a consultant specializing in audio, video, control & acoustical solutions for your next technology laden project.

We have been preparing to help you.

## Technology never sleeps!

Technology evolves at an ever increasing rate. Keeping in touch with the latest and greatest products and techniques keeps us aware of what works and what doesn't. The last thing you want is to be left high and dry because that new widget failed during your big proposal. We make it a point to specify products that have proven their performance for at least a year. Tap dancing through a presentation because the system doesn't work isn't on the top of anybody's list of fun things to do.

## The best approach to efficient design and integration of any project is the team approach

A partnership in the overall project design and installation with top notch consultants and system integrators who have extensive experience in the installation of audiovisual

Snohomish County PUD  
Commission Technology  
Upgrade (Morgan Sound)

projects adds even more predictability. Working as a team helps to ensure your project keeps on track from the design estimates to actual on site operational completion. MBF Audiovisual works with area contractors on dozens of projects during the year. Let us help you with your technology or media project.

## Existing spaces need love too!

On the cover is a picture of Queen Anne United Methodist Church. QAUMC had

Queen Anne United Methodist  
Church (Upper Queen Anne)  
Seattle, Washington

just undergone an extensive remodel of the sanctuary. The improvements made a world of difference visu-

ally but acoustically the HVAC and the long amount of time it took for sound to decay still had the upper hand. MBF came in and analyzed the room using EASE acoustical modeling software. We identified three areas where acoustical treatment could be applied to improve the intelligibility of the spoken word. Working together with the architect a visually pleasing solution was developed that controls how sound travels through the space. Improvements to the HVAC ducting reduced noise caused by the system further improving upon intelligibility.
